

1. PURPOSE

Provide a consistent, fair and defensible process for deciding whether a participant is withdrawn from the Adventure Race for safety, medical, conduct or performance reasons.

2. GOVERNING PRINCIPLE

The Adventure Race deliberately exposes participants and teams to pressure, fatigue, adversity, uncertainty and interpersonal friction in support of approved learning objectives. Withdrawal is justified only where a participant's condition, capability or conduct materially prevents:

NOT GROUNDS BY THEMSELVES

- Slower pace than peers
- Need for reasonable assistance
- Redistribution of equipment
- Increased workload on others
- Frustration or interpersonal friction
- Need to adjust pace, roles or plan

These are normal developmental effects.

3. GROUNDS FOR WITHDRAWAL

4. THE WITHDRAWAL TEST

What specific safety requirement, required activity, or approved learning or assessment objective can no longer be safely or meaningfully achieved, and what evidence shows that reasonable coaching, team adaptation or authorised adjustment will not restore the necessary conditions?

A slower team, greater workload or frustration alone will not normally meet this threshold.

5. DECISION PROCESS

Non-immediate withdrawal: CI NZALC and CI NCO School discuss the case; CI NZALC recommends withdrawal to COMDT ACS for confirmation.

6. IMMEDIATE WITHDRAWAL

An instructor, safety staff member or medical practitioner may immediately stop or withdraw a participant to manage an immediate safety or medical risk, informing CI NZALC and CI NCO School as soon as practicable.

7. RECORD OF DECISION

- ✓ Ground for withdrawal and relevant requirement or objective
- ✓ Observed evidence and any medical restriction
- ✓ Coaching, adaptations or authorised adjustments attempted
- ✓ Why the issue exceeded normal developmental friction
- ✓ Who recommended and who confirmed the withdrawal
- ✓ Effect on assessment and continued course participation
