

TWO CONTINUUUMS. ONE LEADERSHIP FRAMEWORK.

Officer continuum, common LDF spine, Soldier continuum. Every row is one LDF transition read across two career systems.

Shaded: mandated in policy or embedded in the qualifying course. Ranks per the 9 Sep meeting. Sources and evidence status: data register.

VISUAL LOGIC

One status per transition, readable from three metres. Everything that explained a cell (course codes, delivery, evidence tags) is out of the graphic and in the register or speaker notes.

WHERE IS DEVELOPMENT DELIBERATELY LINKED TO PROGRESSION?

The two continuums at the same transitions, then the question for Army. No recommendation.

The issue may not be an absence of leadership development. It is the absence of a consistently deliberate mechanism linking the right development to the right career transition.

SOLDIERS Leadership development is deliberately embedded in key promotion pathways.	OFFICERS Equivalent development exists, but its linkage to career progression varies considerably across the continuum.	THE QUESTION Is that difference deliberate, and if so, what is the rationale?
---	---	---

IS THIS A CONSCIOUS CHOICE?

IF YES:
What is the rationale for treating Officer and Soldier leadership development differently?

IF NO:
Should Army establish a more consistent mechanism for ensuring development occurs before increased leadership responsibility?

No recommendation. The organisation answers.

VISUAL LOGIC
The officer band narrows at CAPT to MAJ and widens again at the top; the soldier band beneath is the comparator. Neither band is labelled a gap or a finding. History and the assessment offered at the meeting are speaker notes.
